College of the Siskiyous

Fire Technology Program

Instructional Program Review

2020-21

Michael Wilson

1. Program Description:

The Fire Technology curriculum prepares students for careers in a variety of areas in the Fire Service. These areas are Specialized, Paid, Volunteer, and Degree applicable. All of these programs are designed to meet all Local, State, and Federal levels. These programs consist of Fire Core classes (6), State Firefighter I Academy (Spring and Fall), CalFire Basic Academy (Summer), Firefighter II, Rescue Track, HazMat Track, Company Officer Track, Instructor Track, Wild-Land Firefighter, and Command Track.

The programs at College of the Siskiyous allows students to complete and Associate of Arts degree or an Associate in Science degree for transfer to a California State University. The focus of this program allows the student to be educated as much as possible in order to be competitive in the Fire Service of today.

a) Current Program Organizational Structure:

The Fire Technology Program is comprised of the following staff positions:

1. Mike Wilson, Chief of Fire Technology, Faculty (District funded) – reports to Mark Klever, Dean of Career and Technical Education (CTE)
2. Numerous Adjunct Instructors and Instructional aides to support the Academies and Stand-alone programs. They all report to Chief Wilson.

b) Primary Purpose:

The purpose of the Fire Technology Program is to provide educational opportunities to our

Students so they are successful in their individual goals.

c) Program Demographics:

According to the data provided, between Fall 2014 and Spring 2019, the Fire Technology

Program had 2,002 students. The students are broken down into the following demographics:

RACE:	Number of Students
African American	22
American Indian/Alaskan Native	31
Asian	21
Filipino	2

d) Services:

The Fire Technology Program offers a wide range of classes to serve the High School and adult level students that are seeking certificates, degrees, career opportunities, and professional development. This program meets or exceeds the requirements for hire for Local government departments volunteer and or paid, State (CalFire), and the Federal (USFS). It also provides the students with expanded skills to meet the Urban Search and Rescue Tasks Force requirements. The Academies meet the State Fire Training requirements as they are currently listed.

e) Delivery:

The Fire Technology Programs are delivered in a variety of options,from the 18 week State Fire Training Academy, the specialized programs (stand-alone) Rescue Systems I, Confined Space, Trench Rescue, Auto extrication, Low Angle Rope Rescue, Tower operations, Wild-land operations, Safety and Survival, Rapid Intervention Crew, Company Officer, Instructor I and II, Swift Water Technician, Volunteer Fire Fighter Certification, Hazard Materials, Avalanche I and II, CalFire Basic training, Incident Command, Driver operator, and additionally the Basic Core classes (Fire Protection Organization, Fire Prevention, Fire Protection Systems, Building Construction, Fire Behavior and Combustion, Fire and Emergency Services Safety and Survival), and also an opportunity for work experience with an local/state department.

f) Updated Curriculum:

The curriculum based on its program needs are updated per a cycle determined by the State Fire Training or the College System determinates. Due to the constant changes within the field of operations, curriculum may be updated more frequently depending on State mandates. Overall, these courses prepare students for direct employment in their field of study.

g) Course Information:

The courses that we offered are based on the Trade Department needs. We provide at a minimum of one (1) State Fire Academy, and three of the six (6) core classes per semester. The addition classes are determined by the needs of the department training needs or recertification requests.

2. External Factors:

a) Budgetary constraints including personnel, support, props, and the improvement of existing buildings and needs for a new training tower and training station.

b) Nearest Fire program is within 70 miles to the South of us and their expansion could affect our enrollment and future growth.

c) Job Market is limited in Northern California and the seasonal employment may lead to the exiting of students from the area seeking more full time employment and career opportunities.

d) Marketing our students is a high priority and our Academy and programs do a very good job preparing them for this challenge. Continuing to find ways to provide a one stop best education format needs to continue to be at the for-front of these Factors.

3. Progress on Outcomes Assessment:

a) SLO's evaluated each semester and evaluated for alignment with programmatic SLO's

b) The programs have been updated to meet State Fire requirements, equipment has been updated to meet those standards and future needs are being addressed

c) Continual program and course assessment throughout the next four years

4. Institutional Program Effectiveness Indicators:

The institutional program effectiveness was touched upon in the program review. Full-time Faculty of one with part-time adjunct instructors currently working in the Fire Profession is currently working to meet the students' needs to succeed.

5. Other Unit-Specific Quantitative and Qualitative Research:

A) Certification Information are based on the program in which they attended. The Academy success rate is has continued to have a 3%-5% drop rate with the factors being time commitment being greater than the student considered is. Test scores not meeting the requirements of the syllabus. Stand-alone classes have a greater success rate mainly due to the 1 to 5 day program and the ratio of instructors to students. The Core Class attendances range is continually increasing in size and for the same reason of the Academy, the drop rate is consistent with time commitments and test scores related to the attendance model.

b) Students are receiving State certifications however, being able to tack these are very limited due to the requirements of time in the profession and the documentation provided by their local department to the State.

c) We are doing our best to track these students with the request of when they are hired to send the program manager that information as we can monitor of successes.

6. Evaluation:

a) Women are underrepresented in this program however; we are seeing a small rise currently.

b) Currently we do not have the staff to provide online classes in this area.

c) Our Partnerships with the Trade Departments are very strong.

d) Best practices are updated and implemented as technology and policies dictate.

e) Our operation needs to grow to stay current in the job market, with that the facilities need to grow as well.

f) Resources are limited due to the need to increase the facilities.

g) Full- time staffing needs to increase as well as a fulltime-classified position to enhance the program to its potential.

h) We have a very active advisory made up of a wide diverse range of trade departments, staff, councilors, deans, and budgetary personnel.

i) Faculty flex opportunities have met some of these items, yet some trainings in our field affect the weekend and credit for two days is only maintained as one. The workload of one staff member does not allow these areas of training to be achieved easily without the financial impact of coverage.

j) The Fire Technology program and stand-alone classes me or exceed the State Fire Training requirements.

7. Vision:

The future of the Fire Technology program is dependent on the ability to stay above the job market interest. Making the students as marketable as possible with up to date trainings and state of the art props to maintain those high standards. Our current tower is useable only because of the contract with the local department in ownerships and therefore a rental contract had to be developed for use because it does not meet the current standards from the college system. In order for this to come more in line with this process a new approved tower has been approved and moving forward as requested. The need for a training fire station would serve several purposes by housing our rolling stock from the weather, provide the station atmosphere that the students need to understand, provide additional classroom and housing areas, and due to the change in weather, conditions of our area interior props can be developed to reduce the postponement of classes. Increase in full-time staffing as the program was designed would allow one position to coordinate the program while the core class instructor would carry the teaching load of the core classes and be able to be used in the instructor roll to add to and fill in for adjunct instructors that for whatever reason was unable to show up. The addition of a full-time Instructional aid (classified) position would enhance the ability to maintain the equipment and aid to the instructors whenever their classes are schedule throughout the year. This would not be a replacement for the split position currently used to aid the Academy when it is in session. Changing the forest plan to allow the expansion of the Fire Technology program as a whole would allow us to add additional classes that are not currently offered in the area. Although we are making great strides in replacement of equipment currently used for our program, we would need to continue to develop an exchange program to meet current standards as those item meet their lifetime schedule.

8. Progress on Prior Goals:

This is the first Program Review that I have been involved in, so the term Progress on Prior Goals may not have the same information as prior Coordinators. I would say that we continue to look at ways to increase enrollment through offering classes and programs that meet the student's needs and the trade departments that have hiring standards. We have been replacing our used equipment that have met their life timelines. We will continue to monitor the progress of our current programs and adjust to those needs as they arise.

9. Four-Year Action Plan and Continuous Quality Improvement Proposal (CQIP)

Non-Academic Program Review

Continuous Quality Improvement Proposal (CQIP)

Personnel request

Issue:

Increasing the staffing levels of the Fire Technology Program, Replacement/Additional Approved Tower, Additional Training Fire Station

Vision:

The College vision has been to provide increased staffing where the justifications of personnel are needed to enhance the programs offered. This is in line with the Institutional Master Plan. The replacement/Additional Approved Tower is needed to reduce the financial rental contract of the "City Tower" and to add an approved tower that meets the current College standards of the non con-x style towers. The addition of a Fire Training Station serves several purposes which include storage of rolling stock of all three CTE programs (Fire, EMS, Law) from the weather conditions. It provides additional classroom over flow options, addresses the lack of sleeping areas not available from the dorm setting. This all adds to the real life, hands on life style of the Firefighter profession. Increasing replacement options and expansion of the equipment and grounds to meet the increase demand of training to insure the marketable ability of students at College of the Siskiyous.

Background:

The Fire Technology Program is a three stage program, made up from the Academies, Core, and Specialty classes. The past history of these programs was covered under the Chain of Command that flowed from the Dean, Coordinator of the Academy, Core Instructor, Adjunct Instructors to support the Academies, and the Instruction Aids to support the Adjunct Instructors.

Rationale:

Due to the increase in enrollment from 7 to 33 in the Core Classes and the continuation of the Firefighter I and the expansion of the Firefighter II programs, and the increase in the amount of specialty classes and their increased enrollment numbers it has become apparent that as we move into the future of our programs more staffing will have to be considered. The programs are growing and therefore the leadership of those programs needs to grow with them as well. Under the current staffing level the need to reach out to future students is not to the level it could be which has the potential to increase the student enrollment numbers to help offset the impact of the cost. Replacement of the current "City Tower" brings us in line with approved props and reduces the rental contact with the local department. The Training station would continue to provide the ability to house overflow students, secure costly equipment, protection for the weather to all three CTE programs, add to the classroom shortage issue, provide the ability for weather controlled training, and provide a true to life response model of the firefighter profession. Replacement of the current flashover prop that the cost of repairs and live span are reaching. Replacement of equipment that has met its life span with equal to replacement. Expand the forestry plan to allow the expansion of the training grounds to meet the increase training demands of the fire profession.

Resource Allocation:

Currently, I don't see how reallocation could be used in this situation. The need for educated professionals to the standards that are set before us are not available from another department of the College to be reassigned.

Recommendation:

Currently the program has one fulltime staff member that Coordinates all of the programs, Teaches the Core Classes, Teaches at the Academy level, Orders and maintains the levels of equipment and directs the repair of the equipment and props. Is the Liaison officer between the College and the "Feeder" Fire Departments. The Coordinator is also responsible for all logistical needs of all classes that make up the total program.

A:

The recommendation to increase one (1) classified position assigned to all equipment and prop needs, maintaining all inventory and testing dates. Prepares work orders under the direction of the Coordinator or his/her designee.

B:

The recommendation to increase one (1) Fulltime staff to share the teaching loads of the program, help coordinate the outside and special classes in conjunction with the current Coordinator. This would also allow the program to branch out to meet the needs of students looking for and promoting the College of the Siskiyous as a total package.

Both positions would follow the standard wage and hiring process as set by the Administration and hiring committee.

C:

Replace the current Tower with an approved tower that continues to meet the State Fire Training and College requirements of the non- con x style. (In process, expected to be completed Fall 2021)

D:

Addition of a Training Fire Station to meet the growing needs of security, classroom shortage, training and housing issues. USDA currently provides a zero percent loan that would cover the project.

E:

Continue to invest in the replacement of equipment that has met it scheduled life usage cycle.

F:

Work within the forestry plan for expansion of props and areas to meet the ever-increasing demands of the Fire Profession education model.

College of the Siskiyous

Operational Unit Program Review Continuous
Quality Improvement Proposal (CQIP) ***Resource:*** _____

Operational:

Board Policy? ☐ Yes ☐ No Administrative Procedure? ☐ Yes ☐ No

Fiscal:

☐ One-time Funds ☐ Ongoing Funding

Issue: *Staffing increase to meet the demands of the program, replacement/addition of an approved tower, replacement of the flash chamber prop, addition of a fire training station, replacement of equipment that has met it life limits, modifying the forestry plan to increase the program potential.*

Vision/Mission/Institutional Master Plan Alignment: *All of these items align*

themselves with the mission, vision, and master plan of the College of the Siskiyous.

Program Review Objective: *The program review has shown the need for these areas to be addressed in order to expand the ability for our students to meet the job market requirements.*

Background: *Described above, the background speaks to this issue and the resolve.*

Rationale: *The rationale of this CQIP has been addressed in the above document.*

Budgetary Impact: *The budgetary impact has been addressed in the above document*

Resource Allocation Adjustments (if any): This information has been addressed in the above document.

Recommendation: *The recommendations have been addressed in the above document.*
