I. Who are we?

The United States Fire Service is a diverse industry offering many career paths. In California, there is a rigorous set of requirements candidates must meet to qualify for work within the state's fire service jurisdictions. The College of the Siskiyous is one of the select few Accredited Regional Training Programs (ARTP) a Division of The Office of the State Fire Marshal (OSFM).

The College of the Siskiyous Fire Technology program is under the Career and Technical Education (CTE) Program that prepares students for various careers in the fire service, including roles such as Professional Firefighters, Volunteer Firefighters, and Wildland Firefighters. The curriculum also supports students pursuing an Associate of Science (AS) degree. All programs meet local, state, and federal standards.

Key program offerings are in 3 categories:

1. Fire / Emergency Response Technology (AS) Courses
    - The 6 required classes are grouped into what we call our Core classes.
2. Fire Academies
    - State Firefighter I & II Fire Academy (offered in Spring and Fall)
    - Cal Fire Wildland 1C (offered in Spring and Summer, non-credit, dual enrollment)
3. Stand Alone Classes
    - Specialized training tracks in Firefighter II, Rescue, HazMat, Company Officer, Instructor, Wildland Firefighter, and Command.

Students at the College of the Siskiyous can earn a **Certificate of Completion for Company Officer or an Associate of Science Degree Fire / Emergency Response Technology**, which can be transferred to a California State University. The college also provides opportunities for professional firefighters to return for continuing education, enabling them to meet requirements for promotions or specialized positions within their organizations.

The goal of these programs is to equip students with the knowledge and qualifications needed to remain competitive in today's highly impacted fire service industry.

A. Fire Technology Organizational Structure

The Fire Technology Program is overseen by Veronica Coots, Interim Dean of Career and Technical Education (CTE). The program includes the following Academic Affairs Staff positions:

Full-Time Administrative Support – CTE

- Monique Gonsalez – Administrative Assistant III - CTE
- Anne Marie Acord – Administrative Assistant I - CTE

Full-Time Faculty - District Funded

- Chris Delcour - Fire Technology Coordinator/Instructor
- Jesse Roberts - Fire Technology Instructor

Part-Time Faculty & Expert Instructional Aids (EIA)

Part-Time Adjunct Instructors: Approximately 40 part-time adjunct instructors contribute significantly to our Fire Program by training the next generation, while also working full-time as professional firefighters. Fire Instructors must meet both State Fire Training Standards and Community College Standards. See Appendix A for requirements.

Expert Instructional Aids (EIA): Approximately 20 part-time EIAs support the Adjunct Instructors and Fire Technology Staff with daily operations. EIAs are Firefighters who are working on becoming both State Fire Training and COS qualified.

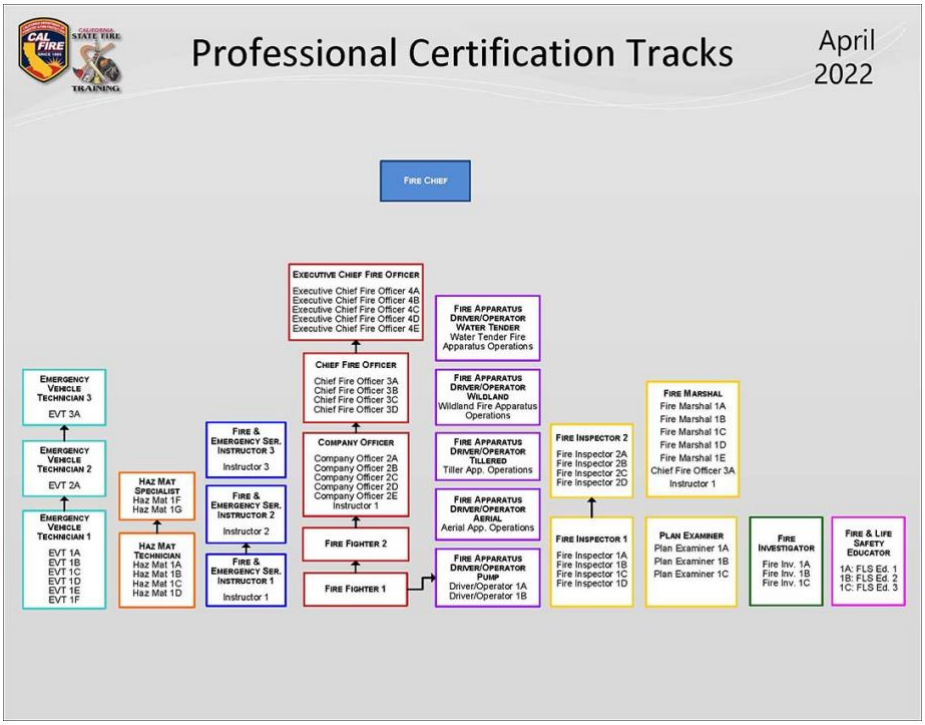
Spencer Hall	*Engineer, Cal Fire*
Jared Al-Jamie	*Firefighter, Cal Fire*

Part-Time Expert Instructional Aids (EIA)

Garrett Bell	*Firefighter, Modesto*	Travis Tygielski	*Captain, Redding*
Chris Brown	*Captain, Sutter County*	Thaddeus Weed	*Firefighter, Cal Fire*
Daniel Cook	*Firefighter, Redding*	Wyatt Carson	*Firefighter Weed*
Clayton Dexter	*Firefighter, Cal Fire*	Tyler Griffin	*LA County (Retired)*
Dominic Poindexter	*Firefighter, Mt. Shasta*	Joe Wood	*Firefighter, Redding*
Usmaro Sanchez	*Lieutenant, Weed*	Aidan Lang	*Firefighter, Cal Fire*
Chelsea Smith	*Engineer, Cal Fire*	Mason Fitzmorris	*Firefighter, Cal Fire*
Keith Smyth	*US Forest Service*	Giovanni Lamanna	*Firefighter, Cal Fire*

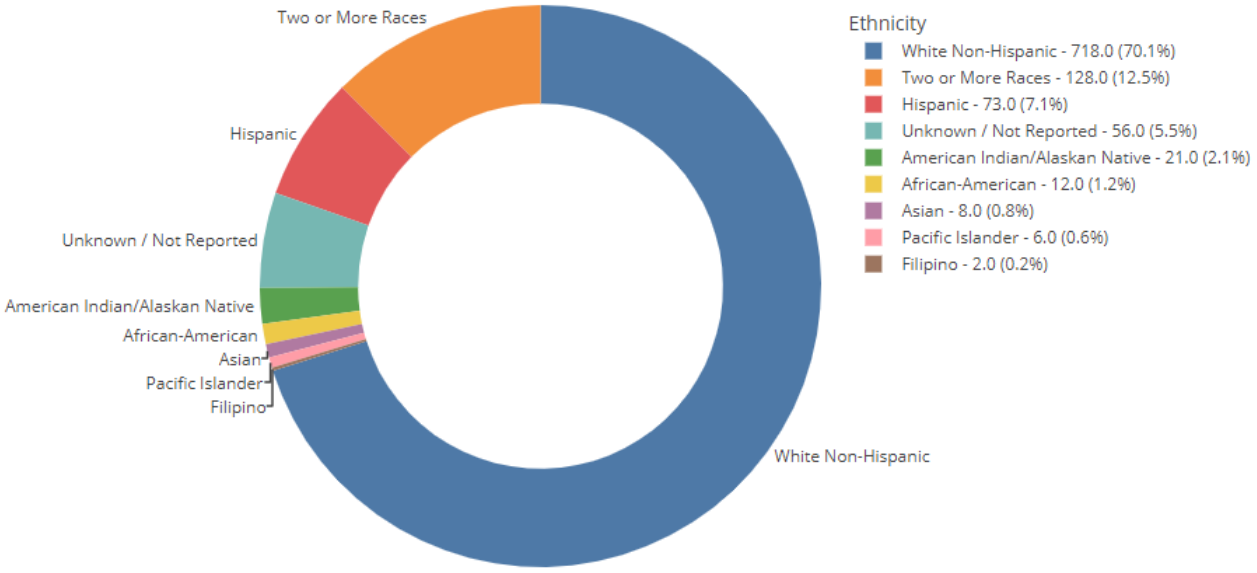
B. What is our Primary Purpose?

The purpose of the Fire Technology Program is to provide educational opportunities to our students, so they are successful in their individual goals. In addition to offering the fundamental classes required to begin a career in the fire service, the College of the Siskiyous Fire Technology Program has a huge demand and enrollment in classes that the state of California requires for promotional opportunities and specialized positions within the fire department the students serve. We see a large number of new enrollment numbers for these classes since we are one of very few institutions that offer these courses.



C. Our Students - Program Demographics

The chart provides a comprehensive overview of the ethnic composition of the Fire Technology demographics. The largest group is White Non-Hispanic, comprising 70.1% of the population with 718 individuals. This is followed by those identifying as Two or More Races, making up 12.56% with 128 individuals.

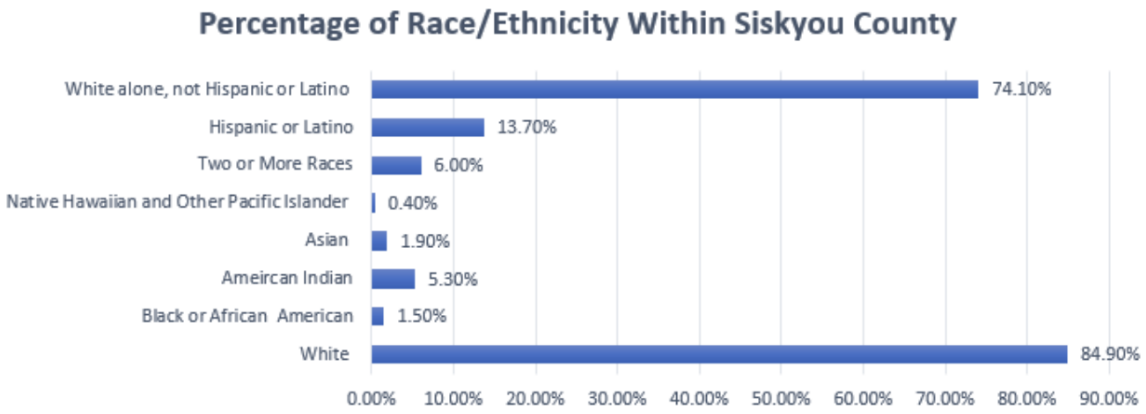


Other notable groups include:

1. Hispanic: 7.1% (73 individuals)
2. Unknown / Not Reported: 5.5% (56 individuals)
3. American Indian/Alaskan Native: 2.1% (21 individuals)
4. African-American: 1.2% (12 individuals)
5. Asian: 0.8% (8 individuals)
6. Pacific Islander: 0.6% (6 individuals)
7. Filipino: 0.2% (2 individuals)

Appendix C – PR Race Details

This chart, based on federal census data, shows the racial and ethnic composition of Siskiyou County. The largest group is "White alone, not Hispanic or Latino" at 74.1%, or 84.9% when including all White-identifying individuals. Hispanic or Latino residents make up 13.7%, followed by "Two or More Races" (6.0%) and "American Indian" (5.3%). Smaller percentages represent Asian (1.9%), Black or African American (1.5%), and Native Hawaiian and Other Pacific Islander (0.4%) populations.



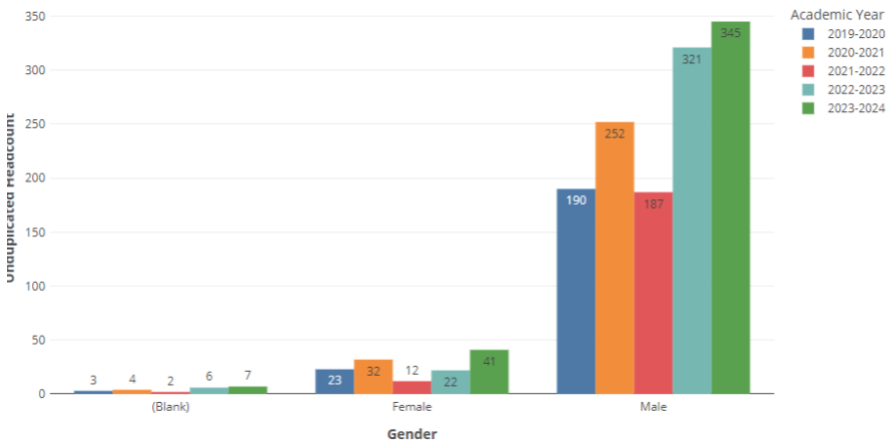
Appendix K – Census Demographics Data Siskiyous County

To further diversify enrollment, it is crucial to implement strategies that promote inclusivity and equal opportunities for all ethnic groups. This can include:

- Educational Programs: Offering cultural competency training and diversity education to foster understanding and respect among different ethnic groups.
- Community Engagement: Encouraging participation from all ethnic communities in local events and decision-making processes to ensure their voices are heard and valued.
- Supportive Policies: Developing policies that address the unique needs of underrepresented groups, ensuring they have access to resources and opportunities for growth and development.

By actively working towards greater diversity, we can create a more inclusive and harmonious community where everyone feels valued and respected.

This chart illustrates the unduplicated headcount segmented by gender and academic year from 2019-2020 to 2023-2024.

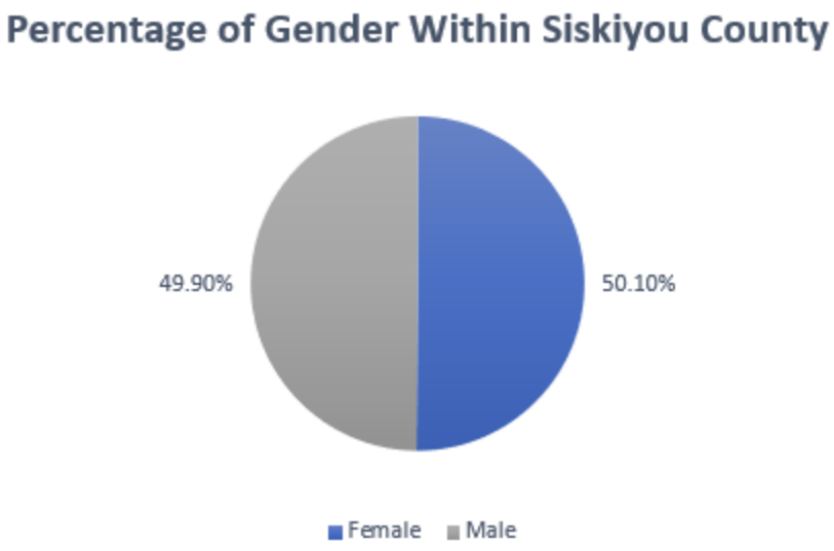


- **Male students** consistently make up the majority of the enrollment, with a significant increase over the years, peaking at 345 in 2023-2024.
- **Female enrollment** shows a smaller but steady presence, with 23 students in 2019-2020, declining slightly in 2020-2021, but rebounding to 41 students in 2023-2024.

This data indicates an overall growth in program participation, particularly among male students, with a gradual rise in female participation.

Appendix E – Gender /Age Tables

The following chart represents the Gender data from the last Federal Census.



Appendix K – Census Demographics Data Siskiyous County

D. What Services do we provide?

The Fire Technology Program offers a comprehensive range of courses tailored to both high school students and adults, aiming to provide pathways for certifications, degrees, career advancement, and professional development. Currently, we offer the following Fire Technology Emergency Response Technology AS and Certificate of Completion - Company Officer

The curriculum meets or exceeds the standards required for employment in local government fire departments, whether volunteer or paid professionals, as well as municipal, state (Cal Fire), and United States Forest Services (USFS). The program is aligned with national standards, including those set by the National Fire Protection Association (NFPA), National Wildfire Coordinating Group (NWCG), California Specialized Training Institute (CSTI), International Fire Service Accreditation Congress (IFSAC), and Pro Board. Additionally, it ensures compliance with California State Fire Training (SFT) guidelines, providing students with the necessary competencies to meet the following standards:

- Company Officer - SFT
- Fire Apparatus Driver/Operator – SFT
- Fire Fighter 1 – SFT
- Fire Fighter 2 – SFT
- Fire Inspector – SFT
- Fire Investigator - SFT
- Technical Rescue Specialist Classes – SFT
- Hazmat Specialist Classes – SFT & CSTI
- Wildland Classes – NWCG

E. How do we deliver our services?

The Fire Technology classes are grouped into 4 basic categories. Classes are delivered in a combination of classroom lectures and lab/drill ground skills practicing. Classes are normally done at the Weed Technical Training Center, but when needed, the classes will use offsite facilities or locations to meet certain student outcomes. Another benefit of taking the class to remote locations, we can reach students who may not be able to travel. Many of our students are working Firefighters who cannot leave the area they protect.

1. Fire Academy – Firefighter 1 & 2

SFT Academy is a 24-week Vocational program that certifies the Cadet as a Firefighter 1 and Firefighter 2 with IFSAC and ProBoard Certifications. This is a degree-specific course required for the Fire Emergency Response Technology AS Degree. Scholarships and Financial Aid are often used to assist with tuition. SMART Workforce also offers support for those who qualify. YouTube Link to Video of Fire Academy 45

2. Core Classes

The 6 Fire Technology Degree-specific courses are required for the Fire Emergency Response Technology AS Degree. Financial Aid is often used to assist with the fees. These Core classes are now offered on a 2 Semester cycle with half being taught in person and the other half being taught online. This allows our students to complete the required degree classes within a 2-semester cycle, either online or in person. We are proud to announce for the first time that Fire Technology is offering Distant Education.

3. Stand Alone Classes

Our stand-alone classes are vocational courses. The Course Plan is normally dictated by the following organizations, SFT, NWCG, FEMA, and CSTI. We also have classes that are developed by our instructors to meet certain requested needs. These classes are normally about 1 week and financial aid is not used.

4. Non-Credit classes

Over the last year, we have pursued a dual enrollment course to reach our high school students. This course, in partnership with CalFire Siskiyou Unit, provides High School Seniors with the basic skills needed to be hired by a Cal Fire professional hand crew. This is a category of classes we are continuing to explore.

F. How we keep the program current

Our curriculum is meticulously updated to align with the needs of our accredited organizations and the evolving standards within the field. The update cycle and the standard are determined by California State Fire Training every 3–5 years. This standard is designed to match the requirements of the National Fire Protection Association (NFPA), the National Wildfire Coordinating Group (NWCG), California State Fire Training, and the California Community Colleges (CCC) system, whichever is shorter.

The extensive range of classes offered by the COS Fire Technology program demands significant effort from our staff to remain current. By consistently updating our knowledge and adhering to the latest standards, we guarantee top-quality education and training for our students. Being active members of the California Fire Technology Directors Association (CFTDA) and attending quarterly meetings, has been an invaluable resource for the most current information available.

To ensure the delivery of a high-quality Fire Technology Program, substantial investment in equipment and consumables is essential. Much of this funding is sourced from the Strong Workforce (SWF) budget, thereby not impacting district funds. Over the past few years, we have made significant investments to modernize the program by updating outdated equipment and training props. Appendix J – Equipment Props

G. What courses do we offer?

The College of the Siskiyous Fire Technology Program offers a comprehensive curriculum tailored to meet the evolving needs and stringent requirements of Fire Departments across the state. Each semester, we ensure the provision of at least one State Fire Academy and a minimum of three core classes online and 3 core classes in person, with a 2-semester alternating schedule.

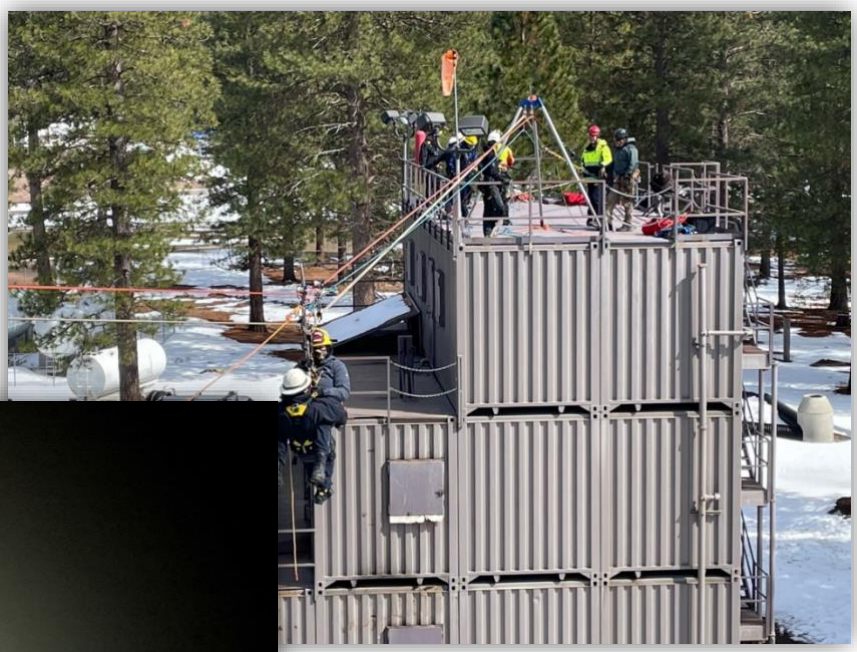
Our course offerings are further expanded based on direct input from our collaborative Fire Advisory Committee, and our local Fire Departments, with Cal Fire being our primary mutual assistance agency due to their high demand for ongoing firefighter training.

Our program stands out among community colleges due to our unique ability to provide stand-alone classes that fulfill specific promotional and specialized training mandates set by the State Fire Marshal. This distinctive feature is made possible by our dedicated pool of

California State-Certified Adjunct Instructors, whose expertise is pivotal in executing these advanced educational demands. Our instructors must go through a rigorous path of education to be certified by the State Fire Marshal.

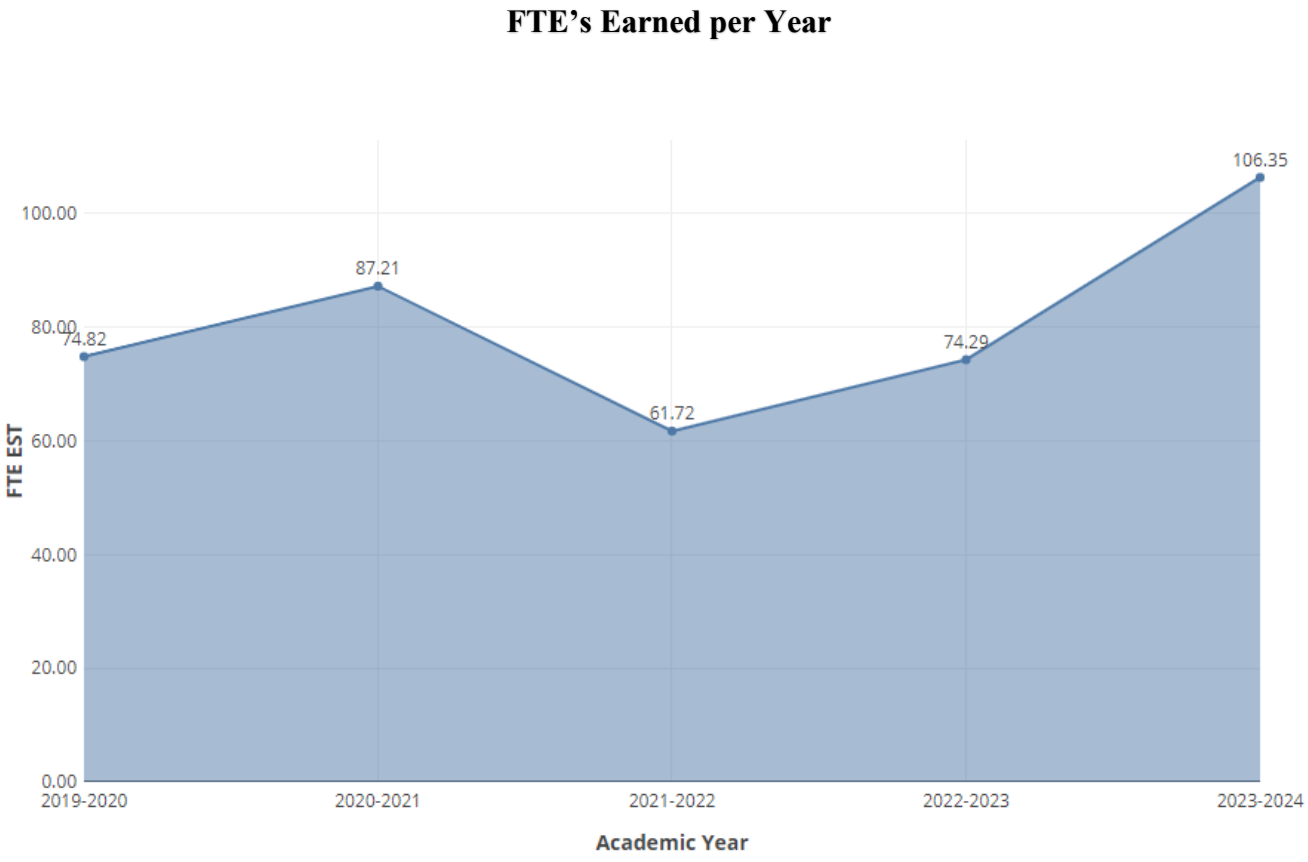
In addition to responding to student inquiries and recertification needs, we also tailor our offerings based on instructor availability—further evidence of our commitment to adaptability and excellence in fire service education.

While eLumen provides a representation of our approximate 60 courses, it should be noted that this does not encompass our full range; we also offer the ability to tailor a class for a specific need and have the potential to add to our catalog. Both NWCG and SFT have more classes that could be added as we expand and grow. Click to See Appendix B – Catalog of Courses



H. Enrollment Trends

The Fire Technology Program at the College of the Siskiyous has demonstrated a dynamic trend in student enrollment over the past six academic years, as illustrated by the Full-Time Equivalent Students (FTES) chart.



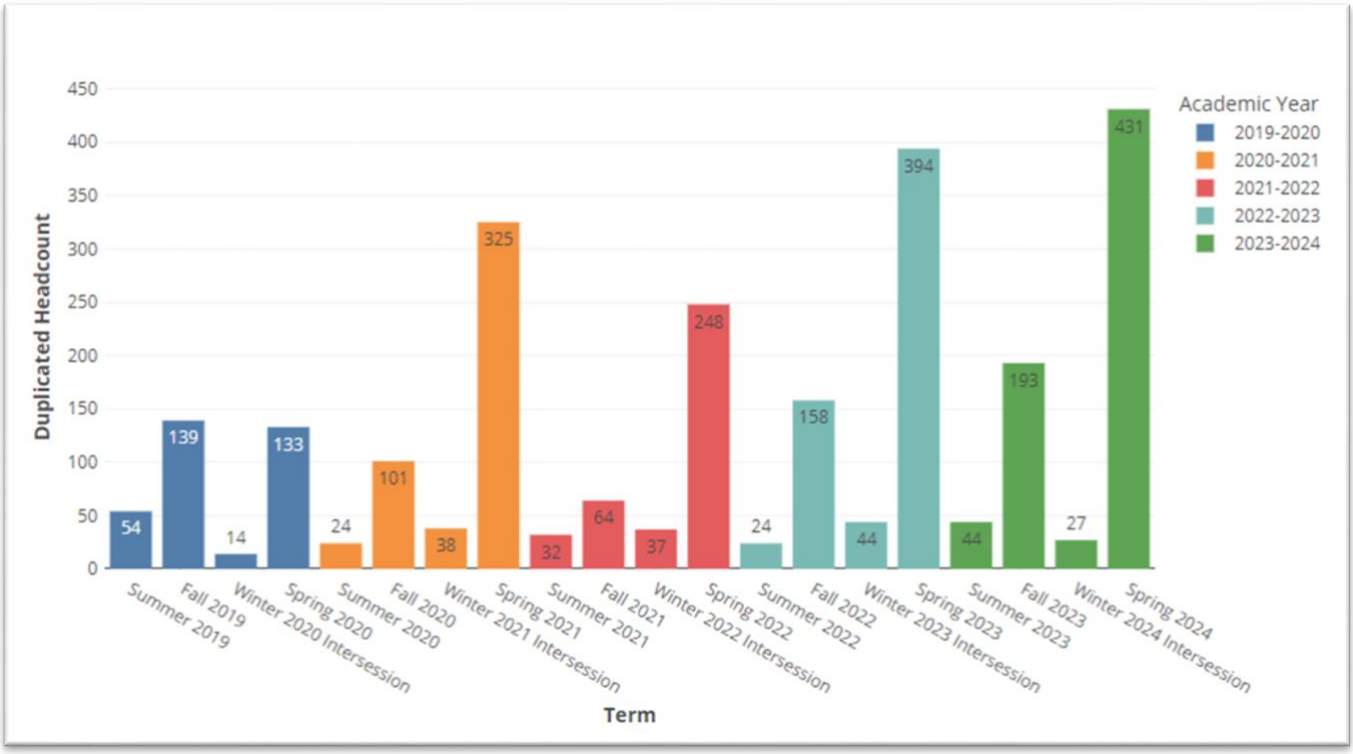
Enrollment Trends:

- **2018-2019 to 2019-2020:** The program maintained a stable enrollment, reflecting consistent interest and participation from students.
- **2019-2020 to 2020-2021:** A noticeable decline in FTES occurred, likely influenced by the global COVID-19 pandemic, which impacted many educational institutions and programs.
- **2020-2021 to 2021-2022:** The program began to recover, showing a gradual increase in student enrollment as the college adapted to new learning environments and safety protocols.
- **2021-2022 to 2022-2023:** A significant surge in FTES was observed, reaching the highest enrollment in the six-year period. This peak indicates a robust recovery and growing

interest in the Fire Technology Program. *It should also be noted that the Full-Time Academic staff was increased to 2.*

- **2022-2023 to 2023-2024:** While there is a slight decrease from the previous peak, the enrollment remains strong, suggesting sustained interest and the program's resilience.

Analysis and Implications: The fluctuating enrollment numbers highlight the program's ability to adapt and thrive despite external challenges. The peak in 2022-2023 suggests successful outreach and program enhancements that attracted a higher number of students. It should be noted that we can directly relate the enrollment success to our Academic Staff increase to 2 Full-Time Staff Members, instead of the prior 1. **For Fire Technology to continue to grow and expand, it is imperative that we receive additional staffing.** Our staff's current workload is *unsustainable* to continue into the future. Moving forward, it is essential to analyze the factors contributing to these trends to maintain and further increase enrollment.



Appendix D – Enrollment Table

Appendix I -High School Transitioning Count

I. Strategic Recommendations

1. **Enhanced Outreach:** Continue and expand outreach efforts to prospective students, emphasizing the program's strengths and career opportunities in fire technology.
2. **Program Development:** Invest in curriculum updates and new technologies to keep the program relevant and appealing.
3. **Support Services:** Strengthen student support services to ensure high retention and success rates, particularly during challenging times.
4. **Community Partnerships:** Foster partnerships with local fire departments and emergency services to provide students with practical experience and job placement opportunities.
5. **Additional Instructor**: We are recommending adding 1 full-time Instructor to oversee the Fire Academy. By adding this additional instructor, we would have the bandwidth to run 2 Fire Academy's each year.
6. **Additional Administrative Staff:** We are seeing an increase in administrative work as our numbers increase. This is putting a strain on our Admin staff; we are concerned that they will not continually handle the increasing workload. We are requesting administrative staff to be assigned primarily to Fire Technology.
7. **Equipment Manager – CTE**: This position has been approved by the prior Dean Mark Klever, and the process was started over a year ago to get this position flown and filled. By not filling this position it is pulling time away from the instructors that could be better used expanding the program and solving larger problems.

II. External Factors that may affect our program

A. Budgetary

The College of the Siskiyous Fire Technology Program has experienced significant growth over recent years, despite facing several external challenges. This narrative outlines the key external factors influencing our program, including budget constraints and reductions in strong workforce program (SWP) funding.

1. Budget Constraints

Our program has seen a steady increase in enrollment, reflected in the growing interest and need for skilled professionals in fire technology. However, this growth has occurred **without a corresponding increase in our budget.** The lack of additional financial resources has necessitated innovative approaches to maintain the quality of education and training we provide. We have optimized our existing resources, leveraged partnerships, and sought alternative funding sources to ensure our students receive the best possible education.

2. Reduction in State Workforce Funding

The recent announcement of the decrease in the state's SWP funding will impose a significant challenge for moving forward. This funding was crucial in supporting various aspects of our program, including equipment upgrades and replacement, upgrading, and purchasing props, new equipment to expand our catalog of classes, and marketing. We have been able to use SWP money to support our program without raising our budget, but we have concerns that if this funding dries up, *our program will not be able to sustain these essential components needed for us to continue*. Despite these financial constraints, our commitment to producing highly skilled fire technology professionals remains unwavering.

3. Increased Demand for Fire Technology Professionals

The demand for fire technology professionals has surged due to the increasing frequency and severity of wildfires. This heightened demand underscores the importance of our program and the need for continued investment in training and education. We are actively engaging with industry partners and community stakeholders to advocate for the necessary resources to support our program's growth and address the critical need for trained professionals in this field.

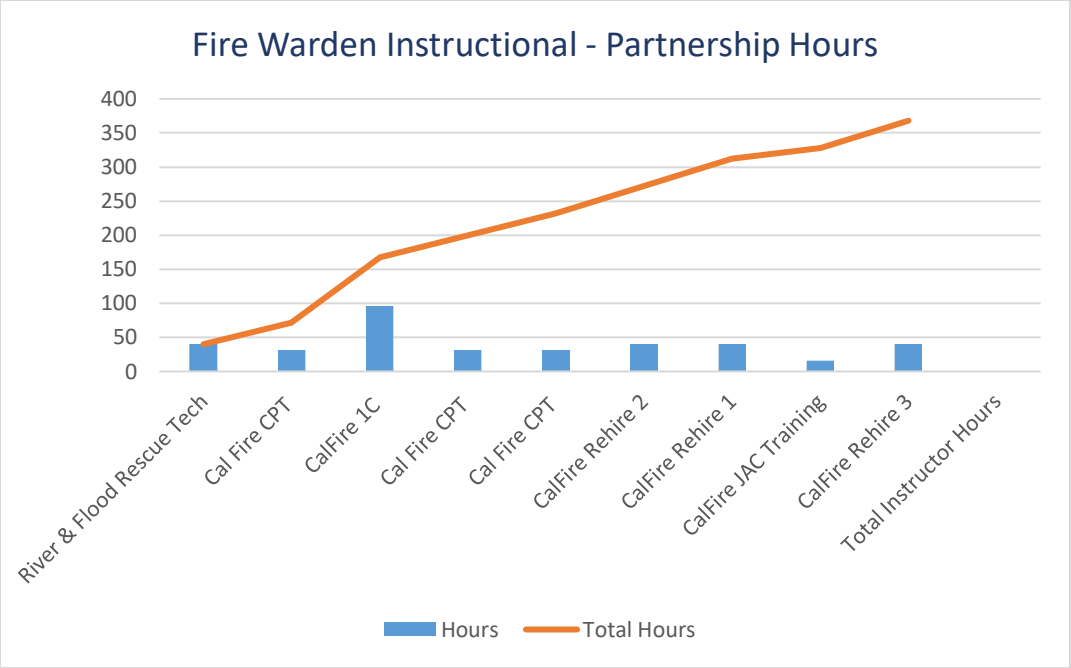
4. Strategic Partnerships and Community Support

In response to these challenges, we have strengthened our partnerships with local fire departments, industry leaders, and community organizations. These collaborations have been instrumental in providing our students with hands-on training opportunities,

internships, and job placements. Additionally, community support has been vital in advocating for the importance of our program and securing additional resources.

5. Fire Warden Instructional - Partnership Hours

The following chart displays instructional hours provided and paid for by the Fire Warden Program & CalFire in various training classes over 2023-2024. The blue bars represent the hours for each specific training, while the orange line indicates the cumulative "Total Hours" across all categories. The chart shows an overall increase in total instructional hours, with a notable rise across categories, highlighting the Fire Warden Program's expanding support for college-registered classes through its partnership.

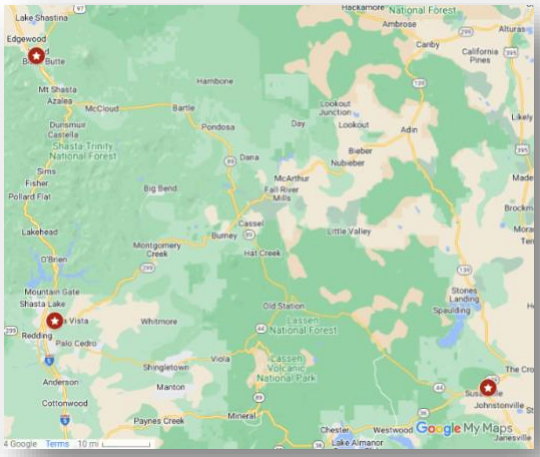


6. Conclusion:

The College of the Siskiyous Fire Technology Program continues to thrive despite external challenges. Our ability to adapt and innovate in the face of budget constraints and reduced SWP funding is a testament to our dedication to excellence in fire technology education. We remain committed to preparing our students for successful careers and meeting the growing demand for skilled professionals in this critical field.

B. Competition:

The nearest Fire program is approximately 70 miles to the South of us and their recent expansion with CalFire could affect our enrollment and future growth. We also have competition to the East in Lassen which is 139 miles away. We do not feel a strong impact from their program.



C. Requirements of four-year institutions

From our research, transfer to any other four-year degree program may vary slightly depending on the College selected. But generally, the items required are:

1. **Complete Fire Technology Courses**: Ensure you have completed foundational courses in fire technology, such as fire prevention, fire behavior, and emergency medical services.
2. **General Education Requirements**: Fulfill the general education requirements, which typically include courses in English, math, science, and social sciences.
3. **Maintain a Strong GPA**: Aim for a competitive GPA, often around 2.5 to 3.0 or higher, depending on the institution and program.
4. **Earn an Associate Degree**: While not always required, earning an Associate Degree in Fire Technology or a related field can facilitate the transfer process.
5. **Transferable Credits**: Work with your academic advisor to ensure that the courses you take are transferable to the four-year college you plan to attend.
6. **Meet Specific Program Requirements**: Some fire service programs may have additional prerequisites, such as certifications or specific coursework. Check the requirements of the program you're interested in.

D. Institutional Regulations, policies, standards, and mandates

California fire academies are accredited by California State Fire Training and must undergo a reaccreditation process every five years through the State Fire Training (SFT) division. This process involves a comprehensive review of the academy's programs, facilities, and instructional methods to ensure they continue to meet the high standards set by the SFT, IFSAC, and ProBoard.

1. **California Health and Safety Code (HSC)**: Authorizes activities under the State Fire Training (SFT) program, including regulations for fire service training and education.
2. **Title 19, California Code of Regulations**: Outlines the California Fire Service Training and Education Program, detailing standards and procedures for fire training.

3. **State Fire Training Procedures Manual**: Documents administrative regulations and provides a framework for SFT's training and education programs.
4. **Certification Training Standards (CTS)**: Developed by State Fire Training, these standards outline qualifications for various fire service roles, based on national standards like NFPA 1021 and NFPA 1051.
5. **IFSAC and ProBoard Accreditation**: The International Fire Service Accreditation Congress (IFSAC) and the National Board on Fire Service Professional Qualifications (ProBoard) provide accreditation for fire service training programs, ensuring they meet national standards.
6. **NFPA Standards**: The National Fire Protection Association (NFPA) sets various standards that fire academies must adhere to, such as NFPA 1001 for Firefighter Professional Qualifications and NFPA 1021 for Fire Officer Professional Qualifications.
7. **NWCG Standards**: The National Wildfire Coordinating Group (NWCG) establishes standards for wildland fire position qualifications, including training, experience, physical fitness, and currency requirements. These standards ensure that personnel are qualified for national mobilization to wildland fire incidents.
8. **Local and Federal Regulations**: Compliance with local and federal regulations, including those set by agencies like CalFire and the US Forest Service (USFS), which may have additional training and operational standards.
9. **Fire Academy Instructor Qualifications**:
    - Fire Instructors must meet California State Fire Training Minimum requirements to teach at the Fire Academy. The Following State Fire Training classes must be completed to be available to teach at the ARTP Fire Academy.
        1. "Instructor 1" - 40-hour class
        2. Ethical Leadership in the Classroom - 8 hours
        3. Certified as a Firefighter 1 and or 2
    - Must also meet College of the Siskiyous Adjunct Instructor Minimum Requirements.

These elements ensure that fire academies in California provide high-quality training and education, preparing graduates for effective roles in fire protection and emergency response.

E. Job Market

Job Market Analysis for Firefighter Jobs in the North State of California

a) Projected Growth

The job market for firefighters in the North State of California is expected to grow by 4% from 2021 to 2026. This growth rate is slightly higher than the national average for firefighter job growth, which is projected at 3.6% from 2022 to 2032. This indicates a steady demand for firefighters in the region, driven by the need for fire protection and emergency response services.

b) Annual Job Openings

On average, there are approximately 111 annual job openings for firefighters in Northern California. These openings result from both new positions created due to growth and replacements for retiring or transitioning workers. However, we believe this figure may be underestimated due to CalFire's increased efforts to hire more firefighters to accommodate a new working schedule. While we cannot project an exact number, discussions with our local partners support this assessment.

c) Current Job Market Overview

The North State of California, encompassing counties such as Butte, Colusa, Del Norte, Glenn, Humboldt, Lake, Lassen, Mendocino, Modoc, Plumas, Shasta, Sierra, Siskiyou, Tehama, and Trinity, has a robust demand for public safety professionals, including firefighters. As of 2021, there were approximately 1,343 firefighter jobs in this region.

d) Wages

The average firefighter salary in the North State of California can vary depending on the specific county and the level of experience. Based on the available data and regional reports, here are some insights:

1. **Butte County**: The average salary for firefighters is approximately $70,000 to $90,000 per year.
2. **Shasta County**: Firefighters earn an average salary ranging from $65,000 to $85,000 per year.
3. **Humboldt County**: The average salary for firefighters is around $60,000 to $80,000 per year.
4. **Siskiyou County**: Firefighters in this county typically earn between $55,000 and $75,000 per year.
5. **Tehama County**: The average salary for firefighters is approximately $60,000 to $80,000 per year[1].

These figures represent a general range and can vary based on factors such as specific fire departments, additional qualifications, and years of experience. The cost of living in these areas also influences the salary ranges.

e) Key Employers and Job Postings

The top employers for firefighter positions in the North State of California include local government agencies, state government, and federal agencies such as the U.S. Forest Service. Job postings for firefighters are relatively frequent, with a posting intensity of 2:1, indicating that employers are actively seeking to fill these positions.

- Skills and Qualifications

  Employers in the region look for candidates with specialized skills in fire suppression, emergency medical services, and hazardous materials handling. Additionally, soft skills such as communication, teamwork, and problem-solving are highly valued[1]. Most firefighter positions require a postsecondary nondegree award, such as completion of a fire academy program.

- Future Outlook

  The future outlook for firefighter jobs in the North State of California remains positive. The region's ongoing development and the increasing frequency of wildfires necessitate a well-trained and adequately staffed fire service. The National Wildfire Coordinating Group (NWCG) standards and certifications, along with IFSAC and ProBoard accreditations, ensure that firefighters are well-prepared to meet these challenges.

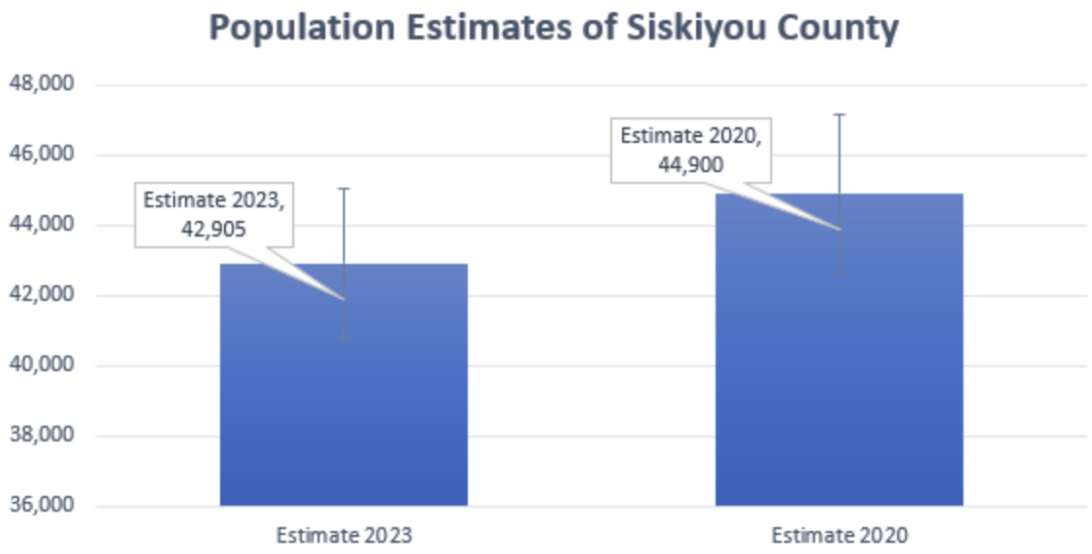
- Conclusion

  Overall, the job market for firefighters in the North State of California is expected to remain strong over the next few years. With steady job growth, competitive wages, and a consistent demand for skilled professionals, firefighting continues to be a vital and rewarding career in this region.

F. Population:

As of the 2020 census, Siskiyou County, California, has a population of approximately 44,900. This obviously leads to limited enrollment from our local high school students. There is, however, significant interest from students in other areas of the state. This element is limited to our housing situation. With our Academy now beginning in the middle of the Fall Semester, many of the dorm rooms are occupied by this time. There are also very few rental opportunities in the local area.

Student High School Data of the 718 Students is located in Appendix I



Appendix K – Census Demographics Data Siskiyous County

G. Standalone Classes

Many of our students who come for a 1-Week Standalone are forced to rent a hotel room for this period. These costs are typically not covered by their own fire departments and are paid out-of-pocket. **Having on-site housing strictly for CTE students** may relieve this added obstacle and attract more students into our standalone programs.

H. Marketing

Marketing our students and the classes we offer is a high priority. We continuing to find marketing strategies to label the College of the Siskiyous as a sole organization to offer students all the requirements to be successful in their careers must be a high priority.

In the last couple of years, we have been utilizing Constant Contact to advertise the Fire Technology classes and have built a data base of over 1000 contacts. We have also been utilizing Fire Nuggets a popular website for Firefighter training and have improved our social media platform with Facebook, Instagram and YouTube.

In conjunction with College of the Siskiyous Career and Technical Education Programs, Fire Technology took advantage of a Marketing grant opportunity project. A Marketing Campaign was directed towards program advertisement. In collaboration with Signarama; Fire Technology, Law Enforcement Academy, and EMS all came together on an exciting project. This initiative focused on creating a more engaging, professional, and visually appealing space to reflect the program's high standards and commitment to public service. This project revitalized the appearance of the building and has been well-received with high regard by the community, students, and staff.

With Signarama's expertise in custom signage and graphic design, the lobby was transformed with high-quality graphics and compelling visuals that celebrate the college's fire technology achievements, historical milestones, and inspiring images of firefighters in action. The project aimed to create a welcoming atmosphere for students, faculty, and visitors, highlighting the program's dedication to excellence in training and education. The graphics and pictures provided a sense of pride and inspiration for students in the program, showcasing the professionalism and dedication required in fire technology and public safety fields.

Overall, the collaboration enhanced the lobby's visual appeal, helping the college communicate its mission and values in a modern and impactful way.

See Appendix H for mor detail Before and After Photos.

I. Location & Pay

1. Our Fire Technology program, located in the remote area of Weed, California, faces unique challenges in recruiting and retaining qualified instructors from outside of Siskiyou County and neighboring areas. Our remote location means that many of our instructors travel significant distances, often incurring personal expenses for hotel accommodations. **Providing additional dormitory facilities for these instructors** would alleviate this burden and make our program more attractive to potential instructors.

2. Additionally, our program's Adjunct Instructor compensation is low compared to similar community college programs in central and southern parts of the state. This disparity further complicates our efforts to attract and retain qualified instructors. Currently, the majority of our adjunct instructors are local, but their qualifications to teach specialized standalone classes are limited.

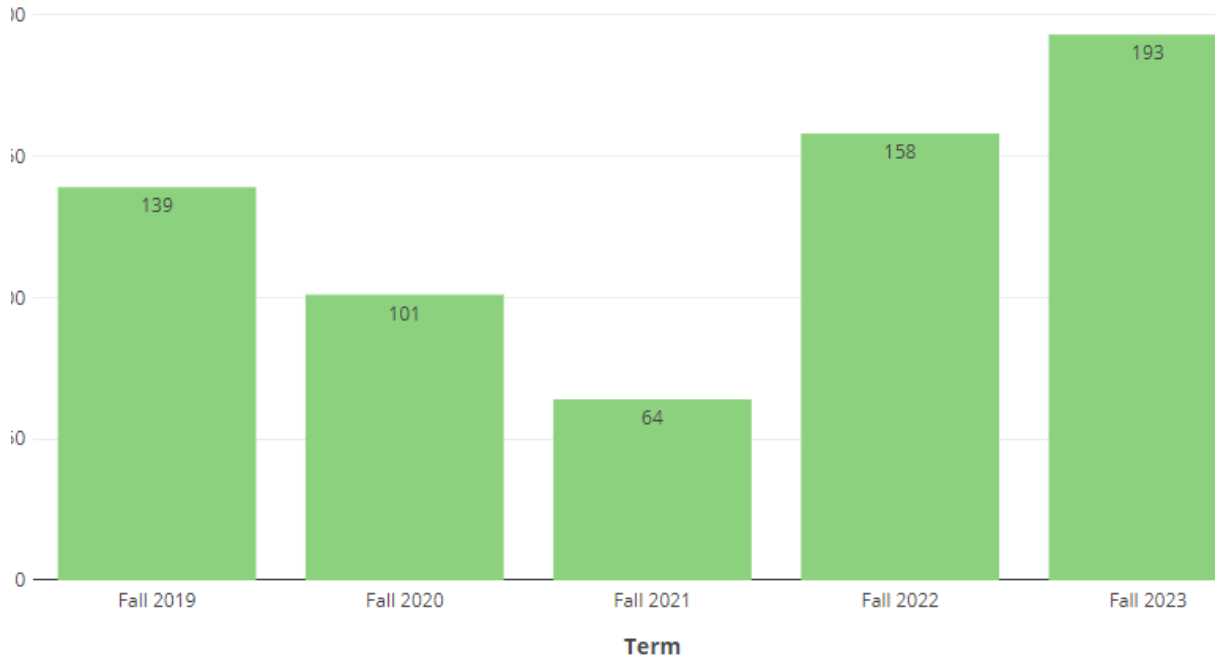
3. Expanding our roster of qualified adjunct instructors is crucial. Doing so will significantly enhance our program offerings, directly boosting enrollment and increasing the demand for our program. Addressing these challenges is essential for the continued growth and success of our Fire Technology program.

III. What is the progress on our Outcomes Assessment?

- SLO's evaluated each semester and evaluated for alignment with programmatic SLO's
- The programs have been updated to meet State Fire requirements, equipment has been updated to meet those standards and future needs are being addressed
- Continual program and course assessment throughout the next four years

A. Fall Semester Success Rates

The chart illustrates the success rates of the College of the Siskiyous Fire Technology Program over five fall terms from 2019 to 2023.



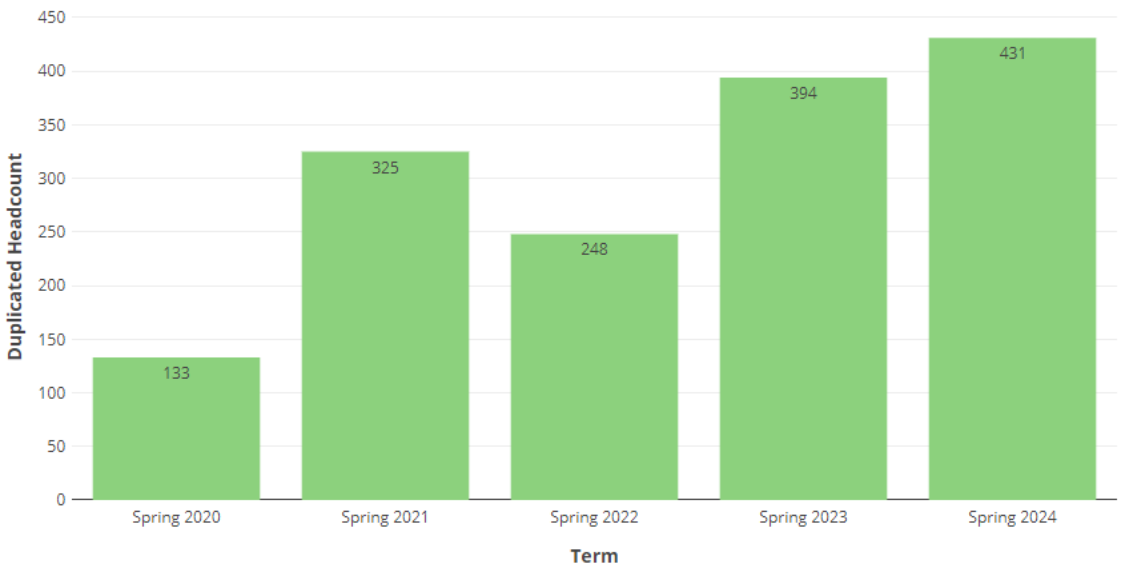
- **Fall 2019**: The program had the lowest duplicated headcount, indicating fewer enrollments.
- **Fall 2020**: There was a noticeable increase in enrollments, reflecting a positive trend.
- **Fall 2021**: The headcount peaked, showing the highest enrollment during this period.
- **Fall 2022**: A slight decline in enrollments was observed, though numbers remained higher than in 2019.
- **Fall 2023**: Enrollments increased again, approaching the peak levels of 2021.

Appendix F – Fall Success

B. Spring Semester Success Rates

The chart illustrates the success rates of the College of the Siskiyous Fire Technology Program over five Spring terms from 2019 to 2023.

- **Spring 2020**: The program had the lowest duplicated headcount, indicating

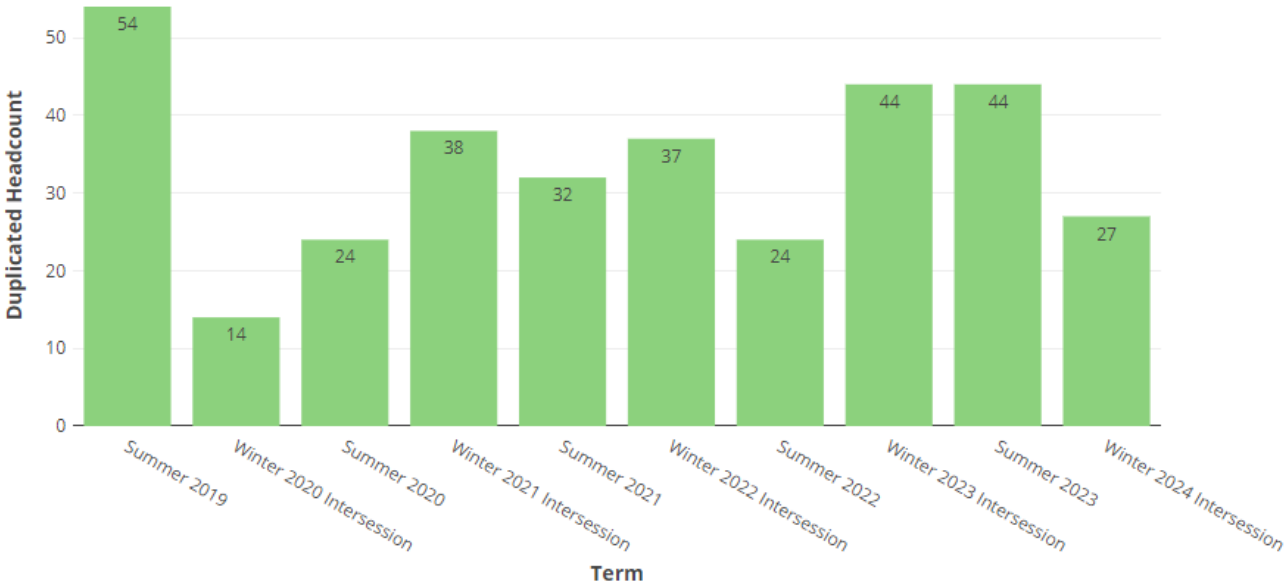


fewer enrollments.
- **Spring 2021**: There was a noticeable increase in enrollments, reflecting a positive trend.
- **Spring 2022**: The headcount continued to rise, showing sustained growth.
- **Spring 2023**: Enrollments increased further, approaching the highest levels.
- **Spring 2024**: The program reached its peak headcount, indicating strong interest and growth.

Appendix G -Spring Semester Data

C. Summer and Winter Semester Success Rates

- **Summer 2019**: The program had a moderate duplicated headcount.



- **Winter 2020 Intersession**: There was a slight increase in enrollments.
- **Summer 2020**: Enrollments remained steady, similar to the previous summer.
- **Winter 2021 Intersession**: A noticeable increase in headcount was observed.
- **Summer 2021**: The headcount continued to rise, showing sustained growth.
- **Winter 2022 Intersession**: Enrollments increased further, approaching higher levels.
- **Summer 2022**: The program saw a significant rise in headcount.
- **Winter 2023 Intersession**: Enrollments remained high, maintaining the upward trend.
- **Summer 2023**: The headcount continued to grow, reaching new heights.
- **Winter 2024 Intersession**: The program reached its peak headcount, indicating strong interest and growth.

This data highlights the program's growth and resilience, particularly in the face of challenges such as remote location and recruitment difficulties. It underscores the importance of continuous curriculum updates and improved instructor accommodations to maintain and further this positive trend.

Appendix H – Winter/Summer Semester Data

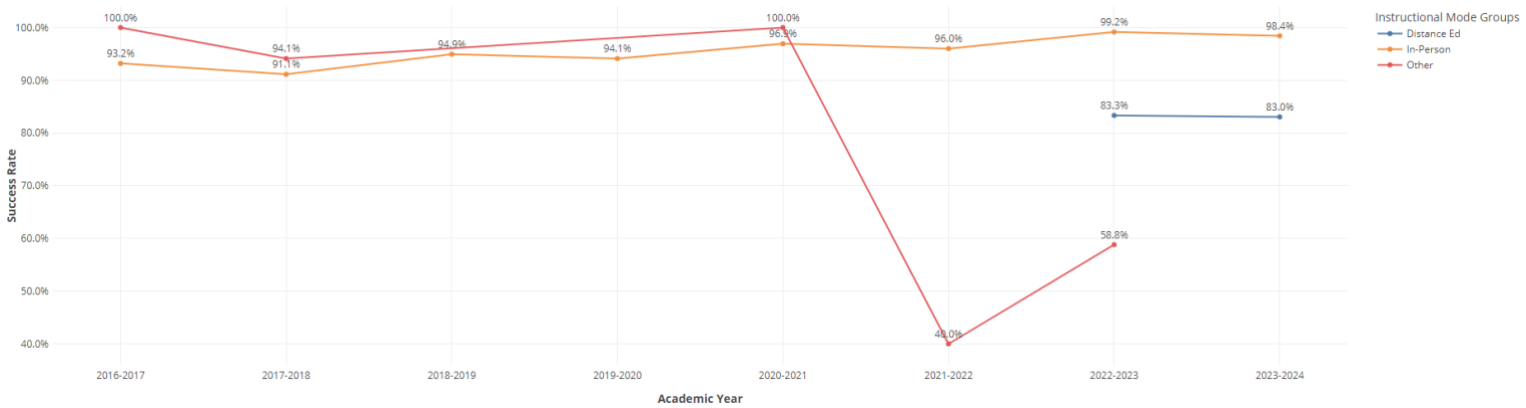
IV. Description of our Institutional Program Effectiveness Indicators:

The institutional program effectiveness indicators focus on staffing, student success, and curriculum alignment with state and national standards. Staffing remains a critical factor, with a growing reliance on adjunct instructors. The program currently operates with two full-time faculty members, supplemented by part-time instructors actively working in the fire profession. However, to support future growth, an increase in full-time staff is necessary. Expanding the roster of qualified adjunct instructors will enhance program offerings and ensure sustained student success. The program's continued alignment with State Fire Training and National Wildfire Coordinating Group standards ensures that graduates meet the qualifications required for various fire service roles.

Student success is consistently tracked across multiple semesters, highlighting both challenges and growth opportunities. Enrollment trends show a steady increase in headcount for both the fall and spring terms, reflecting a growing interest in the Fire Technology Program. Success rates are also tied to ongoing outcomes assessment, with student learning outcomes evaluated regularly to align with programmatic goals. Equipment and curriculum are continuously updated to meet state fire requirements, ensuring that students receive relevant, real-world training that prepares them for immediate entry into the field.

A. Success by Modality

This chart displays student success rates by instructional modality (Distance Education, In-Person, and Other) across multiple academic years. In-person classes show consistently high success rates, fluctuating between 93.2% and 99.2% from 2016-2024. Distance education has maintained a stable success rate of around 83% in the latest years. However, the "Other" instructional category shows significant volatility, with a sharp drop from 100% in 2020-2021 to 40% in 2021-2022, before partially recovering to 58.8% in 2022-2023. Overall, in-person instruction consistently outperforms other modes, while distance education remains steady but lower.



V. Other Unit-Specific Quantitative and Qualitative Research:

A. Major Enrollment Headcount

The chart shows unduplicated headcount figures for the Fire Technology Program across various major categories for the academic year 2023-2024. It breaks down the student enrollments as follows:

- **Fire Officer**: 7 students
- **Fire/Emergency Response Technician**: 86 students
- **Firefighter I**: 41 students
- **Firefighter II**: 6 students

Rows
Major

Major	Unduplicated Headcount
Fire Officer	7
Fire/Emergency Response Tech	86
Firefighter I	41
Firefighter II	6
Grand Total	139

This gives a total of **139 students** enrolled in these specific programs. The "unduplicated headcount" ensures that each student is counted only once, regardless of how many courses or sections they may be enrolled in. The largest group of students is enrolled in the Fire/Emergency Response Technician major, making up the majority of the program's headcount.

B. Headcount for Degrees and Certificate of Completion

The chart displays the unduplicated headcount of awarded degrees for the Fire Technology Program over several academic years, categorized into **Associate in Science (A.S.)** degrees and **Certificates of 2023**

Overall, the trend shows fluctuations in the number of students earning both degrees and certificates, with a notable rise in Associate in Science degrees awarded in the 2023-2024 academic year, increasing from 3 to 9. COA completions have also remained relatively stable, indicating consistent participation in certificate programs across the years.

	Academic Year				
	2019-2020	2020-2021	2021-2022	2022-2023	2023-2024
Awarded Degree	Unduplicated Headcount	Unduplicated Headcount	Unduplicated Headcount	Unduplicated Headcount	Unduplicated Headcount
Associate in Science	2	7	3	3	9
COA	42	33	23	24	32
Grand Total	43	40	26	26	39

VI. Overall Evaluation

The Program Review 2023-2024 for the College of the Siskiyous Fire Technology Program offers a thorough evaluation of its current operations, challenges, and future objectives, focusing on maintaining the program's reputation as a leader in fire service education.

A. Program Overview

The College of the Siskiyous Fire Technology Program is a comprehensive training program designed to equip students for various fire service careers, including professional and volunteer firefighters, wildland firefighters, career advancement, and those seeking advanced certification. The program operates under strict adherence to local, state, and federal standards, providing both certificates and an Associate of Science (AS) degree in Fire and Emergency Response Technology.

B. Organizational Structure

The program is managed by the Interim Dean of Career and Technical Education (CTE), Veronica Coots, and supported by full-time faculty and approximately 40 part-time adjunct instructors who are also active professionals in the fire service. The program's instructional aids (EIAs) provide critical support to adjunct instructors. The curriculum is updated every 3-5 years to align with industry standards set by the National Fire Protection Association (NFPA), the National Wildfire Coordinating Group (NWCG), and California State Fire Training.

C. Enrollment and Demographics

Student enrollment in the program has seen steady growth, particularly over the last two years, with the program's success tied to expanded course offerings and adding additional full-time faculty support. Continual efforts are being made to diversify enrollments and increase female and underrepresented groups. There has also been notable demand from working firefighters returning for professional development for promotions.

D. Program Offerings

The program provides a wide array of training, including State Firefighter I and II Academies, core degree courses, and specialized standalone classes like HazMat, Company Officer, and Technical Rescue training. Delivery is flexible, with both in-person and online classes, accommodating both full-time students and working professionals. High school dual-enrollment programs are being created to introduce younger students to the fire service.

E. External Challenges and Strategic Needs

Despite its growth, the program faces significant challenges, particularly in funding. The recent reduction in strong workforce funding (SWF) will put pressure on resources for

equipment and facility upgrades. There is also competition from nearby institutions, and the program is limited by its geographic location, housing capacity, and lack of adequate facilities such as dedicated dorms for students and a Fire Apparatus Bay to protect essential vehicles and equipment. These constraints need to be addressed to sustain the program's growth and ability to meet industry demands.

F. Strategic Recommendations

Key recommendations for the future include increasing full-time faculty to meet the growing demand for courses, expanding facilities to support both students and instructors, and developing additional partnerships with local fire departments to provide practical training and employment opportunities.

G. Conclusion

The Fire Technology Program at the College of the Siskiyous is a vital component of fire service education in Northern California, producing highly trained professionals in a field where demand continues to rise. However, to remain competitive and to continue providing high-quality education, the program must address its **funding, staffing, and facility challenges**. By investing in strategic improvements, the program can continue to grow and meet the evolving needs of the fire service industry, ensuring its long-term success and sustainability.

VII. What is our Vision?

The program seeks to stay ahead of job market interest, particularly the increased demand for Firefighters. To do this, the program aims to provide students with up-to-date training using state-of-the-art props and equipment. The program has already acquired many updated pieces of equipment, including a digital fire training simulator, a smoke machine, new fire nozzles, new hand tools, fire hose, rope rescue equipment, rescue dummies, and more.

The program offers the following Degree Certificate:

- *Fire/Emergency Response Technology AS Degree (AS)*
- *Company Officer Certificate of Completion (COC)*
- *Fire Fighter 1 and 2 Academy (IFSAC & ProBoard)*

We are in the planning/investigation stages of adding additional Degrees and Certificates of Achievement offered in other Community College Programs. This may lead to adding more elective Fire Technology classes. We currently offer most of the classes to complete the following:

- *Fire Technology / Company Officer AS Degree (AS)*
- *Fire Technology / Degree Wildland AS Degree (AS)*
- *Fire Technology Certificate of Achievement (COS)*

Here are some key aspects of the program's vision for the future:

A. Increased Staffing:

There has been a direct improvement across all measurable markers since the full-time staff has been increased to Two Staff Members. The Fire Technology staff is working at its maximum capacity at present. For the program to continue to grow we will need to Increase full-time staffing.

The program sees the need for an additional full-time Instructor to primarily oversee the Fire Academies. This will allow the Fire Technology Coordinator to continue to focus on expanding and managing the program. We are also in dire need of the Instructional Support specialist position flown and filled. **The College has a huge financial investment in fire equipment and props that need to be maintained.** This position helps maintain CTE equipment and facilities.

The sources also include a list of the program's prior goals, and the progress made toward achieving those goals. For example, the program has successfully increased full-time staffing from one to two instructors. The program has also acquired new equipment, updated its website, and developed distance education capabilities.

B. Training Grounds:

The program will continue to build out its training grounds with new and upgraded props. The priority is to have the propane fire props upgraded in the Weed Tower. They are more than 20 years old, and the system broke over a year ago and parts to repair it are no longer available. The cost to upgrade the props is an estimated $400,000. We continue to investigate Grants but have been unsuccessful.

C. Facilities:

The program sees the need for an apparatus housing facility as a high priority. The program has three fire engines stored outside. Exposure to weather elements causes severe damage to our vehicles. The program wants to begin construction on a Fire Apparatus Bay with the potential to expand it into a training fire station. The fire station would house equipment and provide a realistic training environment. It may include classrooms, dorm housing, and a locker room. The program also recognizes the need for additional classrooms and permanent facilities to meet the demand of growing enrollment and stand-alone programs. We often must scramble to find classrooms for our stand-alone classes.

Cal Fire has recently approached us about the possibility of doing a long-term lease on office space for their training and investigation bureau. We have started meetings to see if this is possible for the College. We see many advantages to this partnership and strongly encourage this project to be completed.

D. Partnership with EMS and Administration of Justice Programs:

The program plans to continue exploring a joint partnership with the EMS and Administration of Justice programs to enhance collaboration and sharing of resources. A long-term goal is to merge the programs into a single area on campus, creating more space and allowing students to train together. We have a vision of a Public Safety portion of the Campus with the back gate being the main entrance.

VIII. Progress on Prior Goals

A. Increased Staffing Levels

- We have successfully added more standalone classes, which has increased the workload both in the classroom and on the administrative side. To continue expanding, it is crucial to receive the new positions we are requesting. We have not been successful in getting our positions posted and or filled.

B. Acquisition of New Equipment

- Significant progress has been made in acquiring new hand tools, hoses, nozzles, and props. This priority ensures our students train with the same equipment currently used in the fire service.

C. Website Updates

- The Fire Technology website has been updated with current material, including a calendar of our standalone classes, and is being maintained regularly.
- We have integrated the Podium software platform into our website, allowing students to text us directly for quick responses. It also serves as a communication tool for all Fire Technology staff.

D. Distance Education Capabilities

- Five instructors are now trained in Canvas, enabling us to offer distance education.
- We have successfully offered our core classes online on a two-year alternating schedule with in-person sessions.
- Additionally, we have started offering standalone hybrid classes.

E. Curriculum Updates

- Progress has been made in updating the curriculum in eLumen. We will continue working in this area to stay current.

F. Apparatus Bay Expansion

- CTE and Facilities have initiated the process of building a larger apparatus bay for storing all CTE vehicles and equipment. However, this process stalled due to higher costs than what Strong Workforce funds could support. This project will need to be included in the district budget, either partially or fully.

G. Joint Training Facilities with EMS and ADJ

- This long-term goal aims to merge our programs into a localized area on campus, freeing up vital space and supporting our students in learning to work together in a public safety team environment. No progress has been made yet.

H. Housing Opportunities for CTE Students

- Students have raised concerns about sharing housing with students from different programs on varying schedules, which affects their study and rest. We are exploring the possibility of using the old dorms for CTE students after the new dorms are built or allocating a section of the new dorms for CTE students.

I. Additional Training Fire Station

- This proposed joint program with local fire departments would support a working fire station on campus, providing on-the-job training for our students and enhancing EMS and fire protection for the campus and local area. This initiative could potentially lower the college's insurance costs and serve as a recruitment tool. We recommend exploring organizations with existing infrastructure to determine if this would be a good fit for our program.

IX. Four-Year Action Plan – Resource Allocation Request (RAR)

Fortunately, CTE has been able to rely on Strong Work Force (SWF) funding to improve and expand our program. By leveraging this funding, we have not had to request any RARs in the last couple of years. We have concerns moving forward that the College of the Siskiyous is relying on this STW funding always being present to support CTE. We would like to see some long-term planning to fund the positions needed *without using SWF funds*.

A. Facilities

- **Apparatus Bay**

  Immediate need for a new and larger Apparatus Bay to store all the public safety equipment. This would also include space for EMS and Police CTE equipment.

- **Dorms for CTE Public Safety Students**

  Students have addressed concerns regarding sharing housing with students of separate programs on different schedules. These concerns highlight the distractions of studying and quiet hours are described as regularly violated causing issues with rest.

- **Public Safety Area**

  All the public safety Coordinators have agreed that it would be extremely beneficial for our programs to be located in the same area. Merging our programs into a localized area on campus will free up vital space on campus that often conflicts with other activities and support our students who will start to learn how to work together in a public safety team mentality.

- **Training Grounds**

  Continue to expand our training grounds with new and upgraded props.

- **Fire Station**
  This would be a joint program with the local Fire Departments. This would support a working Fire Station on Campus that would provide on-the-job training to our students along with providing a higher level of EMS and Fire protection to our Campus and the local area. This could lower our insurance payment for the college and be a great recruiting tool to draw students to our program. We recommend exploring certain organizations that currently have this infrastructure in place to identify if this will be a good fit for our program.

B. Administration

- **Instructor Fire Academy**
  Adding a full-time instructor to manage the Fire Academy
- **Curriculum**

  Continue to work on updating the curriculum in eLumen to stay current with the State Fire Training update cycle.

- **Instructional Support Specialist**
  This full-time CTE position was tentatively approved but has yet to be announced or filled. Primary duties would be to take care of all CTE, equipment, and props.
- **Associate's Degree in Wildland Fire**

  Investigate and research the feasibility of adding a new Associate's Degree track in Wildland Fire. This is being researched by the California Fire Technology Directors Association. Course plans have been developed and beta programs are being run.

C. Equipment/Props

- **Weed Tower – Fire Props Upgrade**

  The Class B-Propane Fire Props are broken and out of date, and parts are no longer available. They need to be upgraded to a new modern system after 20-plus years of use.

  Fire Technology worked with Pacific Power on a grant opportunity to fund this project. Unfortunately, we did not receive this grant funding.

Prepared and Submitted By:

Chris Delcour *Fire Technology Coordinator/Instructor*

Jesse Roberts *Fire Technology* Instructor Date: *Oct. 31, 2024*

Appendix A - COSFT Employment Information

The College of the Siskiyou's Fire Technology "COSFT" has 2 positions that can be applied for based on the following criteria. As a State Fire Training approved ARTP we must also follow State Fire Training Regulations. Potential instructors must be qualified under both College of the Siskiyou's & State Fire Training rules and regulations. Below is a condensed list of the requirements.

The 2 positions available to apply for at the College of the Siskiyous are:

1. Part-Time Adjunct Instructor Job Application
   6 years experience in the Fire Service
   2-year Degree or higher

2. Expert Instructional Aid "EIA" Job Application

Please email me at cdelcour@siskiyous.edu once you have completed your online application.

State Fire Training Minimum Requirements to teach at the Fire Academy.

The information below is from the State Fire Training Bulletin on July 22, 2029.

FIRE FIGHTER I / II ACADEMY INSTRUCTOR REQUIREMENTS

Starting January 1, 2019, new instructors for Fire Fighter I and Fire Fighter II academies will be required to meet the following requirements:

- Instructor I Certification (40 Hours Instructional Experience and completed Task Book)
- Ethical Leadership in the Classroom
- Fire Fighter 1 Certification
- Fire Fighter 2 Certification – to teach those skills

Current Academy Instructors (those who were instructing at the ALA/ARTP on/before December 31, 2018) maintain their status even though they may not be "Certified Instructors." To qualify for this exemption, you must have a "Fire Fighter 1 & 2 Instructor" listed in your Acadis certifications. SFT runs a quarterly report looking for the above certifications and then adds this certification automatically to your Acadis.

INFORMATIONAL BULLETIN
Instructor Changes

Issued: July 22, 2019

State Fire Training (SFT) proposed new instructor requirements and terminology that was approved by Statewide Training and Education Advisory Committee (STEAC), July 2017, and approved by State Board of Fire Services (SBFS), August 2017.

The instructor qualifications used to become a registered instructor and certified instructor has been utilized since the 1980s within SFT. These approved changes will enhance the professional qualifications of new future SFT instructors while utilizing current Registered instructors that are in good standing with SFT.

CURRENT INSTRUCTOR REQUIREMENTS

Instructor Registration remains unchanged through December 31, 2018. Instructor registration currently requires the following:

- Instructor Courses fulfilled from one of the following training qualifications:
  - Attended and passed SFT Instructor I and Instructor II OR
  - Attended and passed SFT Training Instructor 1A, 1B, and 1C OR
  - Attended and passed SFT Training Instructor 1A,1B, and Instructor II OR
  - Attended and passed SFT Fire Instructor 1A and 1B and Training Instructor 1C or Fire Instructor 2A OR
  - Attended and passed Fire Instructor 1A,1B, and Instructor II OR
  - Holds a valid lifetime community college teaching credential
  - Completed the 60-hour Techniques of Teaching course from a University of California (UC) or California State University (CSU) institution OR
  - Completed the National Fire Academy's (NFA) Fire Service Instructional Methodology course
  - Completed four semester units of upper-division credit in educational materials, methods, or curriculum development
- Regional Instructor Orientation (RIO) completed within the previous two (2) years of the application date
- Ethical Leadership in the Classroom and has a signed SFT Instructor Code of Ethics on file
- 80 Hours Instructional Experience

CFTES / FSTEP INSTRUCTOR REQUIREMENTS

Starting January 1, 2019, new instructors applying to teach CFSTES / FSTEP courses will be required to meet the following requirements:

- Instructor I Certification (40 Hours Instructional Experience and completed Task Book)
- Instructor II Certification (40 Hours Instructional Experience and completed Task Book)
- Regional Instructor Orientation (RIO) completed within two (2) years of application date

INFORMATIONAL BULLETIN
Instructor Changes

- Ethical Leadership in the Classroom and have a signed SFT Instructor Code of Ethics on file

Current Registered Instructors (applied for registration on/before December 31, 2018 or are already a Registered Instructor) maintain their Instructor status. Additionally, current Registered Instructors can add additional courses to teach.

FIRE FIGHTER I / II ACADEMY INSTRUCTOR REQUIREMENTS

Starting January 1, 2019, **new** instructors for Fire Fighter I and Fire Fighter II academies will be required to meet the following requirements:

- Instructor I Certification (40 Hours Instructional Experience and completed Task Book)
- Ethical Leadership in the Classroom

Current Academy Instructors (those who were instructing at the ALA/ARTP on/before December 31, 2018) maintain their status even though they may not be "Certified Instructors."

For additional information, questions or concerns please contact:
Kris Rose, Manager of Certification and Instructor Registration at Kris.Rose@fire.ca.gov.

Appendix J – Equipment / Prop Purchased

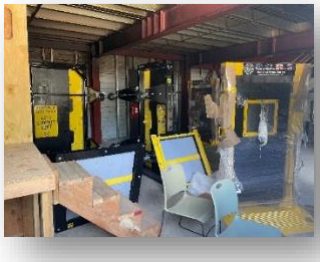
Upgrading the outdated equipment and props for the College of the Siskiyous Fire Technology Program is essential to ensure that students receive the most effective and realistic training possible. Modern firefighting techniques and technologies have evolved significantly. Using modern equipment will better prepare students for real-world scenarios. Updated tools and props not only enhance the learning experience but also improve safety during training exercises. By investing in state-of-the-art equipment, the program can maintain its high standards and reputation, attract more students, and ultimately produce more competent and confident firefighters ready to serve their communities.

- Lion Attack Digital Fire Training Simulator
  - The ATTACK™ Digital Fire Training System combines digital flames, sound and smoke to create a range of fire conditions that respond directly to hose line application.

- Smoke machine
  - Creates realistic smoke-filled training environments without exposing trainees to dangerous conditions

- New Fire Nozzles
  - Updated our nozzles to modern Fire Departments use.
- New hand tools
  - Fire fighter Axes, hooks, belts, lights, and other assortment of hand tools
- Fire Hose – Structure and Wildland hose
- CTE Pick Up Truck –
  - Dodge 3500 pickup truck, used by all CTE as a shared resource.

- Rope Rescue Equipment
- Rescue Dummies
  - Added realistic victim dummies that simulate a real human weight and movement
- Fixed Stand Pipe in Weed Tower
- Replace the damage wood floor in Weed Tower. 4 floors of plywood, the labor was completed by Cal Fire Crews.
- 50 Scott SCBA
  - Donations by city of Berkeley Fire Department, estimated to over $50,000. This will lower the cost of equipment rentals to our Cadets by $600



- Extra Connex's for more storage
- Forcible Entry Doors and Windows
  - Allows us to simulate forcing doors and windows open.
- Chain Saws
- Thermal Imaging Camaras

- Pelican LED Scene Lights
- Pelican Firefighter Light Box's
- DeWalt battery-powered Tool's
- CTE - Dump Trailer
    - We had a remarkably excessive cost on trash disposal by renting large dumpsters. We now can quickly do trash or recycle run to the transfer station. We estimate that this will pay off in less than one year.
- Lockers
    - Students will have a locker room for the first time in the Fire Academy History
- Auto extrication simulator prop
    - Supports IFSAC & ProBoard Testing
- FireVent Roof Ventilation Prop
    - Creates a safe and adjustable platform to perform ventilation skills
- New Flash Over Box
    - This prop allows the student to witness real fire behavior, and it can be controlled.
